

I am a recent graduate of the University of Tennessee with a bachelor's Degree in Mechanical Engineering along with a Minor in Aerospace Engineering. I have experience working in an automotive plant where I assisted electricians maintaining and upgrading assembly lines. Outside of academic and professional experience I have experience with maintaining and repairing my personal vehicle. I also spend my time free time building and flying remote control airplanes and helicopter. My professional goal as an engineer is to innovate and streamline the manufacturing processes via efficient and cost-effective design. I have always had a passion in for the engineering and keep up with all the industry innovations and technologies. I believe this makes me a perfect candidate for the position.

Thanks for your time and please email me at cgalbrai@vols.utk.edu if you have any questions.

sincerely,

O'Neal Galbraith
